

TLS High Quality Cables

Customised special
lengths available

**Special cables
with
professional
transmission
specifications -
halogen-free
and fire-retardant**

The VGA, DVI and HDMI cables, developed especially for presentation and control systems, allow to use an output device at a distance of up to 180 m to a digital or analogue source without the need for an active amplifier.

Advantages

- Low damping allowing for long cable lengths
- Low capacity
- Halogen-free and fire retardant for use in public buildings
- Special customised lengths
- Electromagnetic compatibility (EMC) due to optimal shielding

TLS High Quality Cables

The TLS cables are particularly high quality cables, which guarantee clear signal transmission for any type of application.

Especially developed cables are also part of our product range as well as customised special cable types and lengths.

Standard lengths of 5, 10, 15, 20 and 25 m are supplied with male and female connectors. Special cables can be supplied with male/female on one or both ends according to customer specifications.
